BOOKINGS FORECAST & MEMBER HEALTH

# About 200 sessions a week for the next 8 weeks, and £2,249 to win back now

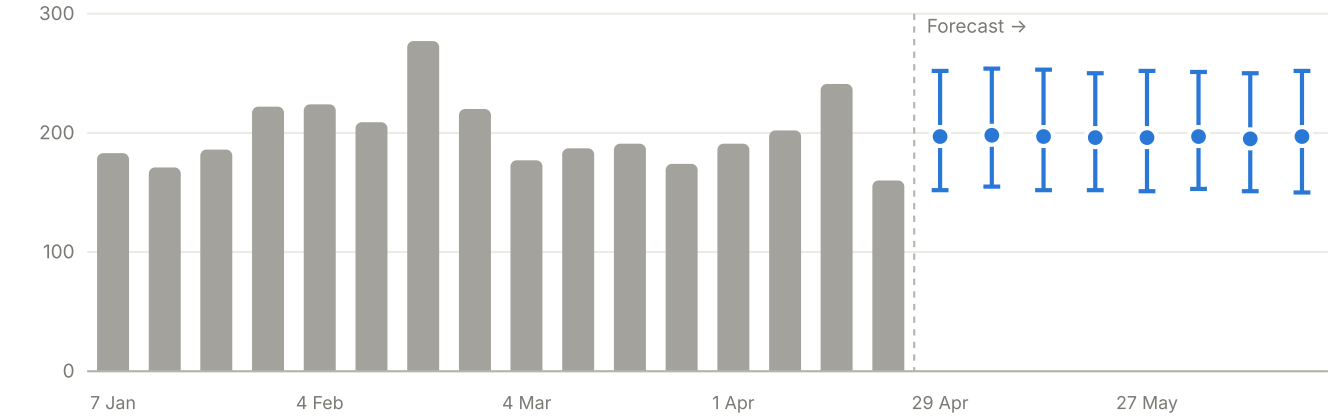

Forecast made with the studio's booking data to 28 April 2026, covering 29 April to 23 June 2026, plus what the data says about members, retention and payments.

**198**
sessions a week expected (80% range 152–252); demand is flat, not growing or falling

**4×**
busier on Saturday and Sunday (39 a day) than Tuesday (10 a day)

**64%**
of pay-as-you-go customers visited once and never came back

### Weekly sessions: last 16 weeks and the next 8

## What to do

1. **Chase £2,249 of failed membership payments.** 9 members' payments failed and were never recovered. Failed payment attempts rose from £578 in January to £2,679 in April. Turn on automatic retries and card-update reminders.
2. **Win back lapsed and one-time visitors.** 147 people came 2+ times and stopped; 360 came once. Bringing back 1 in 10 is worth about £980 a month at £15 a session.
3. **Follow up every first visit within 2 weeks.** The share of new customers who came back within 30 days fell from 35% (January) to 19% (March).
4. **Fill Tuesdays and Thursdays.** They average 10 and 17 sessions against 39 at weekends. Push off-peak pricing on those days.
5. **Log member visits on each member's own account.** 1,777 sessions (53%) were booked through 6 shared accounts, so member usage and churn can't be tracked person by person.

WHY YOU CAN TRUST THE FORECAST

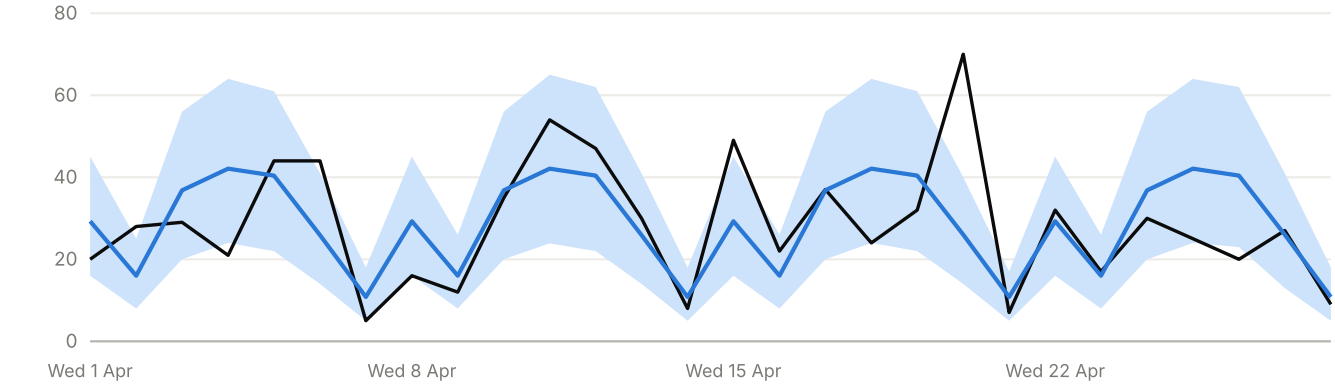

## I forecast April first, using only January to March, then checked it against what happened

**4.5%**
average weekly error for the chosen model in April

**22 of 28**
April days where actual sessions landed inside the 80% range

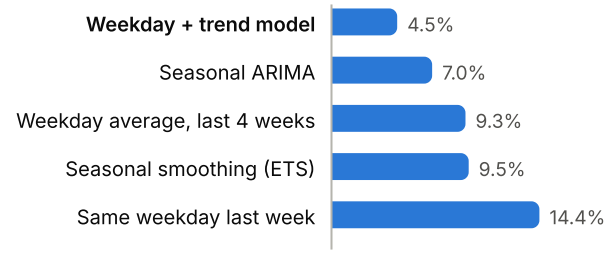

**+1.5%**
difference between forecast and actual April total (794 sessions)

### April 2026: forecast vs actual daily sessions

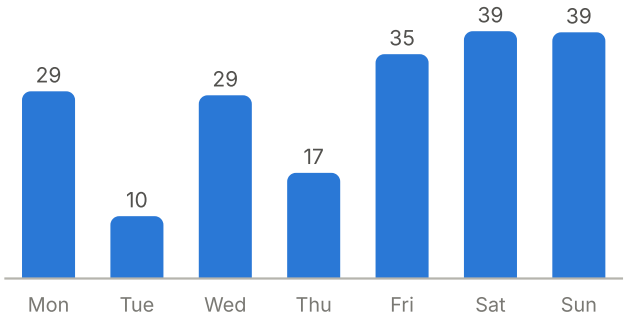

The low first week is Easter. Individual days swing a lot (±10 sessions), so plan staffing on the weekly figure and the day-of-week pattern, not a single day.

### Five methods tested: weekly error in April

Lower is better. The weekday + trend model (a Poisson regression) was the most accurate and is used for the live forecast.

### Expected sessions by day

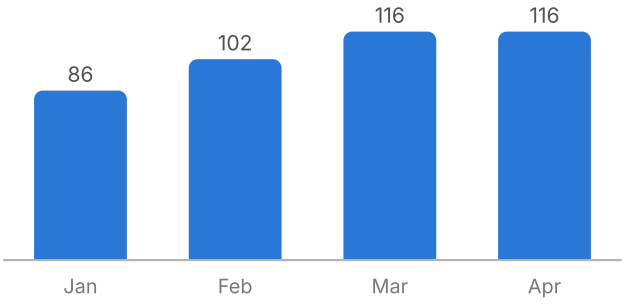

Average sessions per day, 29 Apr – 23 Jun.

MEMBERS, CUSTOMERS AND PAYMENTS

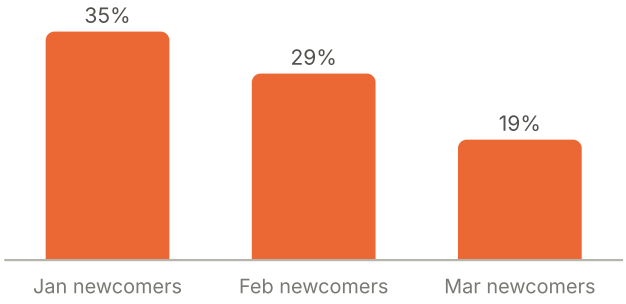

# Memberships are growing fast; pay-as-you-go customers are leaking away

### Paying members per month

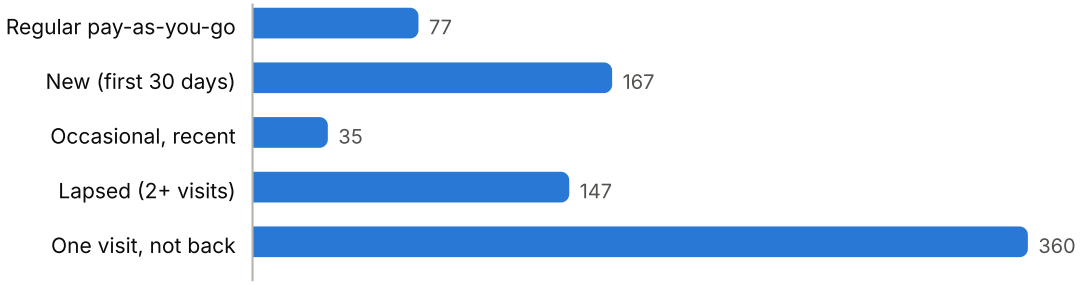

Up 35% since January. Membership income rose from £3,790 to £5,613 a month.

### New customers back within 30 days

Return rate by month of first visit (268, 204, 166 new customers).

### Pay-as-you-go customers by segment (as of 28 April)

786 people with their own booking account, excluding the 6 shared accounts. "Lapsed" = 2+ visits, none in the last 30 days. The client has a private win-back list of 507 customer IDs.

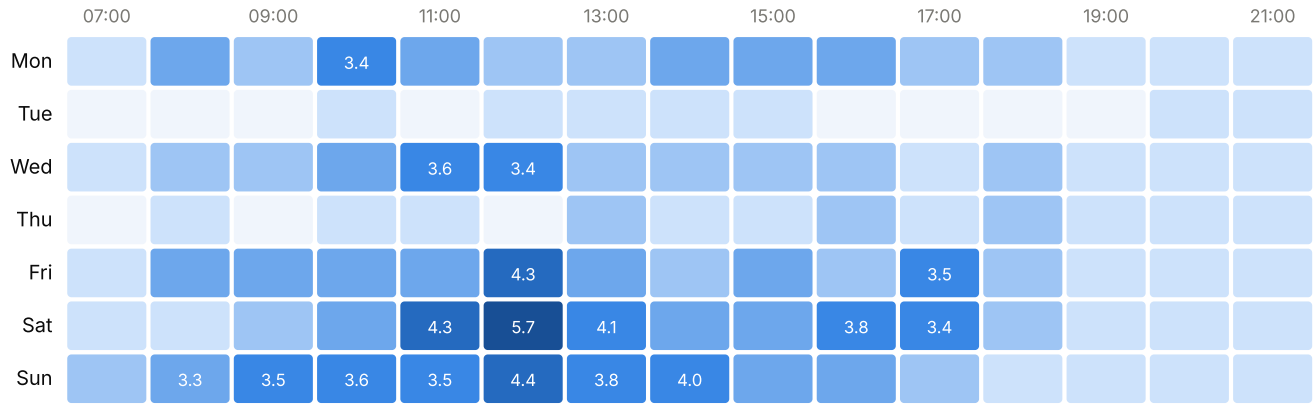

### Failed payments

120 membership charges failed (£6,043 attempted). 73 were paid within 14 days on retry; 47 were never recovered, worth **£2,249 from 9 members**. Failed attempts are rising each month as the membership base grows, so this will keep getting bigger without a fix.

STAFFING AND THE CAFÉ

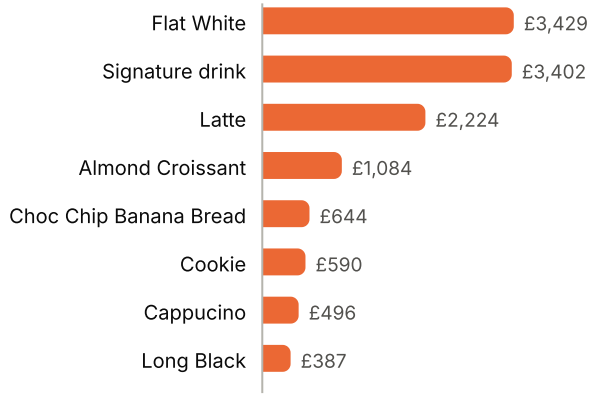

# When people book, and what the café sells

## Average sessions booked by hour and day

Darker = busier. Based on booking time, January to April. The midday block (11:00–15:00) on Friday to Sunday is the busiest window to staff.

## Top café items by sales (£)

From the till's product report. The report's date range isn't shown, so these are shares, not a weekly rate.

### Café opportunities

- Drinks bring in £14,620, food only £2,696: about £1 of food for every £5.4 of drinks. A coffee + pastry deal after a session is the easiest win.
- In the week the weekday report covers, the café took nothing on Sunday, one of the two busiest days for sessions. Worth checking whether the café is open then.
- To forecast café stock by day, the till needs an itemised export (each sale with date and time).

## Assumptions and next steps

- Sessions = paid or complimentary bookings for contrast therapy, off-peak, hyperbaric oxygen, breathwork and women-only sessions. Failed, refunded and pending payments are excluded.
- Six accounts with more than one session a day on average were treated as shared or house accounts: kept in the demand forecast, left out of customer segments.
- Win-back value assumes 1 in 10 lapsed customers return for 2 sessions a month and 1 in 10 one-time visitors for 1, at £15.
- **Next:** refresh the forecast monthly with new bookings, add the itemised café export, and track win-back and payment recovery each month.
